

DCA Member Agency Overview: San Bernardino Valley Municipal Water District

San Bernardino Valley Municipal Water District (San Bernardino Valley) is a wholesale water provider serving a portion of southwestern San Bernardino County. San Bernardino Valley imports State Water Project (SWP) supplies and manages groundwater recharge to support long-term water reliability for the region. About 25 percent of the region's total water supplies come from the SWP, which helps maintain a healthy groundwater basin and supports both the local economy and quality of life for residents.

“Our region relies on the State Water Project as a key part of our supply and it is important that the system delivering water keeps pace with today’s demands. Continued investment in conveyance strengthens the reliability of our local groundwater resources and supports the homes and businesses that depend on this water every day.”

T. Milford Harrison – Board President

“Water from the State Water Project is essential to our ability to replenish the groundwater basin and support the long-term water needs of the San Bernardino Valley. As our region grows and conditions become more unpredictable, dependable access to this supply allows us to plan responsibly and maintain a reliable water system for our communities.”

Heather Dyer – CEO and General Manager
